J. KENT RUDEEN

EXPERIENCE

REACHONE INTERNET - Lacey, WA
Lead Web Developer & Designer, March 2001 to Present
  Sample of Clientelle:

- **Nazarene Theological Seminary** (December 2003 - Present)
  Built customized content management system for site with multiple customized registration forms and online credit card payment ability. Recently completed an online application form for admission and learned newest technology of utilizing ColdFusion Components to best provide a non-linear framework when filling out the online application; applicants are able to save and come back later to complete application.
  Technologies Used: ColdFusion MX 7; ColdFusion Components; HTML; CSS; XHTML; MS-SQL; 3rd-Party Payment Gateway Integration

- **JESUS Film Harvest Partners** (September 2002 - Present)
  Designed and developed their site from an information-only website into a full-scale dynamic website that also provides weekly updates, downloadable resources, registration forms, streaming video, weekly mass 'newsletter' emails, etc. Developed from the ground up a customized bulk emailing system that sends emails out in batches to help messages avoid being flagged as spam; each mailing list is easily input and sent out via the admin area of the site.
  Technologies Used: ColdFusion MX 7; MySQL; HTML; CSS; Flash

- **Big Splash / West Puget Sound Youth For Christ** (January - May, 2006)
  This client had difficulties in the past, selling tickets to their large youth events online. A large bulk of the ticket orders was expected to (and did) occur all at one time. Client stressed the importance of being able to have a robust system that could handle the influx. To meet their needs, I carefully developed the online ticket ordering system with minimal ColdFusion code bulk to be less taxing to the server and database. Ticket orders were automatically exported to an Excel document and sent via email daily every morning to the client. The website and the event were a great success!
  Technologies Used: ColdFusion MX 7; MySQL; 3rd-Party Payment Gateway Integration

- **Jinjor** (February - August, 2005)
  Developed a clean and quick shopping cart system that met their limited budget, and implemented code to pull live shipping costs from UPS directly. Also provided and wrote a "how to" manual to help client manage inventory, orders, and shipping status for their online store.
  Technologies Used: ColdFusion MX 6; MySQL; UPS Shipping Integration

- **Gift of Joy** (August 2002 - February 2004)
  First site implemented with ColdFusion. Provided client a site that had the ability for anyone to be able to sponsor a child in China. Developed a system that could handle Chinese language characters; select the child with greatest need; integrated with PayPal for the monthly child sponsorship payment; provided ability for sponsor to read messages from child and view up-to-date school report cards.
  Technologies Used: ColdFusion MX 6; MySQL; PayPal integration

- **World Mission** (March 2001 - November 2003)
  Designed and developed multiple sites for World Mission and its subsidiary departments. All sites had a flash-based navigational top bar with a similar "one brand" design that complemented each site's different look. Worked with many contacts for each subsidiary department to learn and provide what was best for their individual websites. Negotiated with World Mission directors that a 'uniform design' style for all departments was not best for them on the whole, which was the opinion of the department heads. Developed a full flash site that provided information on World Mission in general; developed a mini-site that provided streaming videos created by WM Communications.
  Technologies Used: HTML; Flash;

J. Kent Rudeen

Profile

Professional Web Developer (Bachelor of Arts, Northwest Nazarene University, 1999)

Lead web designer and developer with eight years of experience in:
- Creation of original art and design for websites
- Static and dynamic website development
